

Best Cosmetic Treatment Provider 2018 - Victoria

Dr Tass is one of Australia's leading Cosmetic Doctors with over 15 years' experience in the field of facial cosmetic medicine. His clinic's offer a wide range of treatments and products to suit every clients' requirements, as we find out when we profile the firm.

At the Dr Tass Cosmetic and Skin Clinics a wide range of facial aesthetic treatments are provided including complex non-surgical face lifts, skin rejuvenating and skin tightening

laser device treatments, body sculpting and simple anti-wrinkle and dermal filler treatments provided by highly qualified doctors and therapists. Having four conveniently located clinics across Melbourne, the clinic is able to cater to those within the

CBD and also across broader Melbourne.

Currently, the aesthetic industry is booming, and while cosmetic treatments are becoming more popular and socially acceptable in Australia, Dr Tass and his team are increasingly finding that most of its patients opt for the 'natural look'. As such, their doctors look at the face as a whole, rather than zoning in on individual areas, and as they all boast high levels of artistic ability they are able to recognise the flaws which are associated with ageing which start to detract from their key features. This recognition and

artistic eye can then enable them to create balance and harmony resulting in a more beautiful face, ensuring that they meet their clients' needs in today's market.

Looking ahead, as the aesthetic industry in Australia continues to grow and prosper, so Dr Tass's clinic will continue to evolve and offer more to their patients through the latest technology and innovative techniques. The team are constantly looking to expand their clinics and brand, and building upon its current success will remain the firm's ongoing focus.
